Welcome to Today’s WCET Webcast

OCTOBER 5, 2023

The webcast will begin shortly.
There is no audio being broadcast at this time.
An archive of this webcast will be available on the WCET website next week.
Hosted in partnership with:
Welcome!

- Slides can be downloaded via the link in chat.
- Please use the **Question** box for questions and **Chat** for other information exchange.
- Follow the Twitter feed: #WCETWebcast.
- Slides, recording, and shared resources will be emailed to attendees.

CAMILLA ROBERTS
Director - Honor and Integrity System, Kansas State University | President, International Center for Academic Integrity

JUDITH SEBESTA
Founder and Principal, Sebesta Education Consulting LLC
Definition: Academic Integrity

Academic integrity is a code of ethics for students to follow in their courses, exams, and overall behavior. Each student’s work should be their own. Students complete their own assignments, take their own exams, and earn their own grades.

What is Academic Integrity?, Honorlock Blog, October 2021
Definition: Artificial Intelligence

Intelligence—perceiving, synthesizing, and inferring information—demonstrated by machines, as opposed to intelligence displayed by humans and non-human animals. It is an umbrella term over generative AI, natural and large language models, and machine and deep learning. AI in an instructional environment may include (but is not limited to) adaptive and automated assessments, practice opportunities, and personalized tutoring and feedback. In addition, AI tools are being used to generate content, write code, conduct research, resolve accessibility issues, reconfigure writing processes, and detect plagiarism. AI tools also can be used to provide learning support in such forms as identifying at-risk students, recommending courses, increasing motivation, and predicting student performance.

Supporting Instruction and Learning Through Artificial Intelligence
Definition: Generative AI

A form of artificial intelligence that can create new content such as text, visual images, code, audio, or video because its neural networks have been trained on a large amount of data. Outputs might include digital art, essays, short answers, blog posts, computer code, press releases, and other types of novel content.

Supporting Instruction and Learning Through Artificial Intelligence
Definition: Large Language Model

A form of text-based generative AI (e.g., ChatGPT) that is trained on an enormous amount of text so that it can predict and create a given sequence of words. This capability allows the model to "understand" inquiries and replicate human language in a largely coherent (if not always accurate) way.

Supporting Instruction and Learning Through Artificial Intelligence
AI Policy Statement Template

• PART 1: Introduction & purpose
• PART 2: What are AI tools?
• PART 3: Acceptable AI use
• PART 4: The negative impact of using AI tools
• PART 5: AI Policy enforcement
